Boil Water Rescind Notice

For the following Roads in the Jackson Well Area:

VZCR 2410, 2404, 2405, 2413, 2409, 2437, 3227, and FM 1651

Any customer in the area above who experiences low to no pressure during the line repair on September 28, 2026.

On **September 28,2026,** the Texas Commission on Environmental Quality (TCEQ) required our public water system MacBee Special Utility District, PWS ID #2340045, to issue a Boil Water Notice (BWN) for the above area and to inform our customers that due to the distribution pressure dropping below 20 PSI, or an interruption in service, water from our system must be boiled before consumption.

Our system has taken the necessary corrective actions to restore adequate pressure, disinfectant levels, and/or bacteriological quality. It has provided TCEQ with testing results indicating that the water no longer requires boiling as of September 30, 2026.

If you have questions, contact the Office at 903-873-2109 or 430-307-5544. If a customer wishes to reach TCEQ, they may call 512-239-4691.
